Profile

A Java and Spring Boot backend developer with 4.5+ years of experience designing and building scalable, production ready backend services. Strong hands on experience with microservices, event driven systems, and database backed applications, along with solid DevOps exposure in CI/CD automation, containerization, and cloud native deployments. Proficient in Java, Spring Boot, AWS, Docker, Kubernetes, and Jenkins, with a focus on building reliable systems and streamlining delivery workflows for high performing teams.

Skills

- **Language and Framework:** Java 17+, Spring Boot, Spring Batch, Python
- **Cloud:** AWS (EC2, S3, IAM, RDS, Lambda, CloudWatch)
- **DevOps:** Docker, Kubernetes, Terraform, Ansible, Helm, ArgoCD
- **CI/CD and Build Tools:** Jenkins, Spinnaker, Maven
- **Database and Messaging:** Oracle, Cassandra, PostgreSQL, Message Queue(MQ), Kafka
- **Monitoring and Tools:** Prometheus, Grafana, Git, Postman
- **Practices:** Microservices, Infrastructure as Code, Agile/Scrum

Professional Experience

Software Engineer Senior Analyst, Accenture

Kolkata, India June 2025 – Present

Project – Loan Program Management Service

- Developed a Spring API based application to manage vehicle and loan program information for lease and retail automotive manufacturers.
- Integrated Confluent Kafka to publish events for downstream processing.
- Implemented an excel parser using Apache POI to process loan program data.
- Executed Blaze Meter performance tests, validating the processing of up to 15 Excel files per minute.
- Designed and implemented Jenkins CI/CD pipelines integrated with Spinnaker for automated deployments to AWS production and non-production environments.

Software Engineer Analyst, Accenture

Kolkata, India September 2022 – June 2025

Project – Automated Loan Data Deletion using Spring Batch

- Designed and implemented a Spring batch application which automated data deletion from Oracle and Cassandra database based on loan data logic.
- Optimized data deletion by implementing chunk processing, pagination and multi-threading to delete 30+ million records from Oracle and Cassandra within 4 hours production window.
- Performed Unit Testing using JUnit, UAT and performance testing using Blaze Meter by deleting 40 million records from parent and child tables.
- Implemented E-Mail functionality in each batch deletion application to send run summaries with current and previous deletion counts.
- Implemented CI/CD pipeline using Jenkins to automate build, test and deployment to AWS ECS clusters and provisioned using Terraform.

Project – Relationship Data Service and Cloud Deployment

- Designed and implemented a Spring based API and IBM MQ driven loan processing system that integrated with two external services and persisted data in Cassandra.
- Designed and executed performance test scripts using Blaze Meter to validate APIs, handling 200 concurrent users with average response times under 500 ms.
- Automated build and deployment using Jenkins and Spinnaker.

Software Engineer Associate, Accenture

Kolkata, India June 2021 – September 2022

Project – Application Relocation from Legacy Data Center

- Migrated 40+ applications, 10+ Oracle and Cassandra database from legacy to new data center, ensuring zero business disruption and smooth transitions.
- Installed Java, Jenkins, and other essential tools on new Linux hosts in the new data center, performing post-installation verification and configuration.

Project – Browser Modernization and Spring Upgrade

- Migrated 10+ Spring based application from 2.7 to latest version, upgraded Java version to 17, thoroughly tested and deployed them to production environments via Jenkins.
- Provisioned new Linux hosts, installed all essential software, and successfully migrated various applications within the non-production environment.

Certifications

- AWS Certified Solutions Architect – Associate (July 2024)
- GitHub Copilot (December 2025)

Personal Projects

Spring Microservice – Java(Spring), Docker and Kubernetes

- Developed a Spring-based microservice application implementing modular, scalable backend services built on top of docker and kubernetes.
- Used Rabbit MQ for event driven communication.
- Containerized the service with Docker and deployed to ECS for testing.

AWS Serverless API Application – AWS Lambda (Python), API Gateway, and DynamoDB

- Built a serverless REST API Application using AWS Lambda (Python).
- Used API Gateway to pass requests from client to Lambda. Used DynamoDB to store data.
- Deployed and monitored using CloudWatch for logs and metrics.

FastAPI TODO App – Python, PostgreSQL, Docker, Kubernetes, Helm, Kustomize, ArgoCD, GitHub Actions

- Developed a RESTful API using Python FastAPI with PostgreSQL as the database.
- Containerized the service with Docker and created Kubernetes deployment manifests with Helm charts and Kustomize overlays for flexible environment management.
- Built a CI/CD pipeline with GitHub Actions to push images to Docker Hub.

Freestyle CICD Pipeline – Jenkins, Docker, Ansible, Terraform

- Automated a freestyle CI/CD pipeline using Jenkins, Docker, Ansible and Terraform. Integrated Github web hook to trigger pipeline on push event.

Education

Master of Computer Application, Narula Institute of Technology

Kolkata, India 2018 – 2021

- **Project** : Fence Installation Device – A patented project built with Python and JavaScript. supports IoT and Android device.

Bachelor of Computer Application, Narula Institute of Technology

Kolkata, India 2015 – 2018

- **Project** : Mei Chat – A chat-based Android application built with React Native, featuring real-time messaging.
